Abstract (en)

[origin: WO2013144188A1] A device (1) for removing air from a container, the container comprising a base and at least one wall (7) extending there from to define an enclosure (9) with an opening opposite the base, the device comprising: a support element (2) configured to allow a user to hold and move the device (1) within the enclosure (9) in a push/pull movement; a flexible airtight sealing element (3) attached to or part of the support element and projecting from the edges of the support element (2) so that the sealing element (3) is in continuous sealing contact with an inner surface of the at least one wall (7) when the device is within the enclosure (9) and generally perpendicular to the wall (7) and a valve mechanism arranged such that air can pass through and/or around the device (1) and the device can be put in motion within the enclosure (9) only when actuated by a user.
