Abstract (en)
[origin: WO2013147827A1] Rubber articles, including tires and tire treads, that are manufactured from a rubber composition that includes a functionalized styrene-butadiene rubber (SBR) and a polybutadiene rubber, wherein the functionalized SBR includes a functional group attached as an active moiety and wherein the butadiene portion of the SBR has as trans-1,4 content of between 30 wt. % and 70 wt. %. The rubber composition further includes a plasticizing system having a plasticizing resin having a glass transition temperature (T_g) of at least 25 °C and a plasticizing liquid, wherein the plasticizing system is added in an effective amount to provide the rubber composition with a glass transition temperature of between -25 °C and -15 °C and with a dynamic modulus G* at 60 °C of between 0.8 MPa and 1.3 MPa. The rubber composition is reinforced with a silica filler.
