Abstract (en)

[origin: WO2013147609A2] A composite for manufacturing a plastic body comprises a plastic base material and a filler of coconut shell powder (CSP) which has an average particle size of a maximum of 60 micron and is present in the composite in a quantity of 30-70% by weight. The composite is relatively environmentally-friendly due to the relatively large quantity of natural filler and displays improved material properties, certainly when applied as construction element.
