Abstract (en)
[origin: WO2013148400A1] Methods, compositions, and systems are provided for characterization of modified nucleic acids. In certain preferred embodiments, single molecule sequencing methods are provided for identification of modified nucleotides within nucleic acid sequences. Modifications detectable by the methods provided herein include chemically modified bases, enzymatically modified bases, a basic sites, non-natural bases, secondary structures, and agents bound to a template nucleic acid.
