Abstract (en)

[origin: WO2013143606A1] The present invention relates to a method for operating a hydraulic pump arrangement for a hydraulic tool, particularly a portable hydraulic tool operating in an energy-independent manner or dependent on a power network, wherein the hydraulic pump arrangement is detachably connected via a hose connection to the hydraulic tool, is driven by an electrical energy source and the hydraulic pump arrangement is controlled in a load-dependent manner by changing over from a load state to a non-load state and vice-versa, wherein a first, higher electrical energy supply is provided for the load state and a second, lower electrical supply is provided for the non-load state. In order to solve the problem of providing a novel method for operating a hydraulic pump arrangement, and a novel hydraulic pump arrangement which guarantees an increased usage flexibility, usage safety and ease of use, the invention relates to a method according to which the battery is mounted on the hydraulic pump arrangement so as to be manually detachable in a receptacle that is accessible from the outside, as well as a power adapter (25) for connecting an electrical cable to a generator (29), and the battery (24) and the power adapter (25) have a geometry matching the geometry of the receptacle (26), such that the hydraulic pump arrangement can be supplied with power during usage optionally either via the battery (24) or via the power adapter (25).
