Abstract (en)

[origin: WO2013167310A1] The invention relates to a module unit (DS1), comprising: a first connection device (A1), a second connection device (A2), a switch unit (S1a) connected between the first connection device and the second connection device, a detection unit (E1a), a control unit (SE1), which is connected on the output side to the switch unit (S1a) and on the input side to the detection unit (E1a), and a receiving unit (E1), which is coupled on the output side to the control unit (SE1), and comprising either one additional detection unit (E2a) which detects electrical current or electrical power for a consumer unit (V1), based on a third connection device (A3), or a memory unit (M1), in which a value of the electrical current or of the electrical power for a consumer unit (V1) is saved.
