Abstract (en)
[origin: WO2013144215A1] The invention relates to a method for training of personnel in quality control for the filling of amorphous products (128) into primary packaging means (118). The method comprises the following steps: a) at least one providing step, wherein, in the providing step, at least one test set (112) of filled primary packaging means (118) is provided, the test set (112) comprising a plurality of primary packaging means (118) filled with the amorphous product (128), wherein at least one primary packing means (118) of the filled primary packing means (118) is affected with at least one impurity (138), the impurity (138) comprising at least one fluorescent marker (142); b) at least one training step, wherein, in the training step, the test set (112) is presented to at least one person to be trained, the person to be trained carrying out a visual quality control for detecting impurities (138), wherein the result of the training step is documented; c) at least one verification step, wherein, in the verification step, the test set (112) is irradiated with excitation light (116), in which fluorescent impurities (138) are detected and wherein the result of the verification step is documented; and d) at least one comparison step, wherein, in the comparison step, the result of the training step and the result of the verification step are compared.
