Abstract (en)

[origin: WO2013143730A1] The present invention relates to a temperature-control device for controlling the temperature of an electrical component, in particular a lithium-ion battery, having at least one hollow space in which cooling liquid can be or is accommodated, wherein the temperature-control device comprises at least one valve (3), which is flow-connected to the hollow space, for discharging the cooling liquid (9). The invention also relates to an electrical system which has at least a temperature-control device according to the invention and an electrical component (1); and to a method for reducing the risk of a short circuit on an electrical component (1), and to a motor vehicle which has an electrical system according to the invention.
