Abstract (en)

The present invention relates to a rotatable drum (1) for a laundry treating machine (2), the rotatable drum (1) comprising a substantially cylindrical lateral wall (13a) having a rotation axis (L), the substantially cylindrical lateral wall (13a) being provided with at least one perforated portion (13a') having a plurality of through holes (15) which are arranged in an orderly manner so as to form groups (15a) of through holes (15), said through holes (15) in each group (15a) being separated one another by first interspaces (15b), said groups (15a) being in turn separated one another by second interspaces (15c) lacking through holes. Advantageously, said first interspaces (15b) and said second interspaces (15c) of said at least one perforated portion (13a') have substantially the same radial distance from said rotation axis (L).
