Abstract (en)
[origin: CN104343210A] The invention relates to an earthquake-proof building block. A block (1) for a masonry comprises at least a projecting portion (3) formed in the longitudinal direction on the upper surface and a corresponding recess or containing portion (5) on the lower contact surface, the containing portion is adapted to the upwardly projecting portion of another same block arranged below. The percentage by volume of free volume in the block in a row of perforations (13) has less than 5% of the total volume of the block (1).
