Abstract (en)

[origin: CN104344307A] The invention relates to a lighting and / or signaling device, in particular for a motor vehicle, comprising a first light source (10), a guide (12) of the light generated by said first source, said guide (12) having the property of transmitting the white light to the decomposing as it propagates along a longitudinal axis (X) of said guide (12) so that the light transmitted by said guide (12) has a colouration different along its longitudinal axis, according to a distance from said first source (10). According to the invention, said device further comprises a plurality of second light sources (20) arranged on an axis (X') in the vicinity of the longitudinal axis (X) of the guide (12) of the light generated by said first source (10), and at least a coloring means, capable of correcting the color of the light emitted by the second light sources (20) and / or said guide area (12), so that the hue lights emitted by said guide area (12) and at least one second light sources (20) is granted. The invention also relates to an optical unit comprising said device.
