Abstract (en)

A system (10) for implementing a control or access function is described. The system (10) comprises a mobile device (30) having a mobile identifier, a short range communication interface and a long range communication interface. The system (10) also comprises a local device (20) having a local identifier. The system (10) also comprises a remote device (40) comprising a long range communication interface and a controller. The mobile device (30) is configured for short range communication (22) with the local device (20) for receiving the local identifier, and the remote device (40) is configured for long range communication (32) with the mobile device (30) for receiving a communication comprising at least the local identifier and the mobile identifier. The controller of the remote device (40) is configured to perform at least one control or access action in response to receiving the communication from the mobile device (30). A controller for implementing a control or access function is also described. Methods of implementing a control or access function and of providing a system (10) for implementing a control or access function are also described, as are methods of registering a mobile device (30) for use with a system (10) for implementing a control or access function, and of implementing a control or access function with a mobile device (30) having a mobile identifier and comprising a short range communication interface and a long range communication interface
