Abstract (en)

[origin: WO2013149761A1] The invention relates to a revolver component (10) for a reagent vessel. At least one vessel structure (14) which is filled or can be filled with at least one liquid (16) is formed on the revolver component (10). The revolver component (10) has at least one capillary structure (18) which is arranged on and/or in the at least one vessel structure (14) and by means of which a capillary force can be exerted onto the at least one liquid (16), whereby the at least one liquid (16) can be at least partly suctioned into an internal volume (20) of the at least one capillary structure (18). The invention likewise relates to a reagent vessel insert part and to a reagent vessel. The invention additionally relates to a method for centrifuging a material and to a method for pressure treating a material.
