Abstract (en)

[origin: WO2013149894A1] The invention relates to a robot-controlled shaping tool (2) and to a process for shaping, particularly for seaming workpieces (5). The shaping tool (2) has a robot terminal (9) and a frame (7) with a pressing element (10) guided adjustably on said frame. The shaping tool (2) further has a detection device (14) for the pressing force F and an adjusting device (15), subject to open-loop or closed-loop control by the detection device (14), for adjusting the pressing element (10). The adjusting device is designed to compensate for variable robot elasticities.
