Abstract (en)

[origin: WO2013149901A1] The invention relates to a drive device (1), in particular a brake booster for a motor vehicle, with a drivable shaft (2) that has an input side and an output side and is rotatably mounted in a housing (3). According to the invention, the shaft (2) is formed in several parts and has at least one damping part (11, 17) for absorbing rotationally and/or axially acting forces.
