Abstract (en)
[origin: WO2013149289A1] A pallet system (50b) is formed from a pallet (10) and a plurality of panels (54a, 54b, 54c, 54t and 56). The pallet (10) has a base (12) configured to receive members of a lifting apparatus to enable lifting of the pallet (10). The panels (54a, 54b, 54c, 54t and 56) are coupled to each other and the pallet (10) to enable the panels to be moved between a closed configuration and an open configuration. In the closed configuration the panels can surround and contain one or more articles on the pallet (10). In the open configuration one of the panels is positioned to provide an opening to enable transfer of an article through the opening onto or off of the pallet (10) in a direction substantially parallel to a plane of the pallet (10).
