Abstract (en)

[origin: WO2013149896A1] In a mixing valve (6) for an internal combustion engine (1) of a motor vehicle, the distance between pivot axes (12, 13) of two flaps (10, 11) is smaller than the diameter of the largest flap (10). The flaps (10, 11) are also connected to a single drive device (8). The drive device (8) ensures a collision-free coupling of the movements of the flaps (10, 11). As a result, the design of said mixing valve (6) is particularly compact.
