Abstract (en)

[origin: WO2013150064A1] The invention relates to a laboratory device system and a laboratory device (1.6) for treating fluids and solids, comprising a device module (7) with a unit (2) for treating fluids and solids and an operating and/or display unit (3), an operating and/or display module (8) physically separated from the device module (7) and encompassing the operating and/or display unit (3) in whole or in part, and means (10, 11) for wireless communication (9) between the device module (7) and the operating and/or display module (8), wherein the laboratory device system has an information management system (40), which is arranged remotely from the laboratory device (1.6), is connected to the operating and/or display module (8) via at least one communication channel (CH) and exchanges data with the operating and/or display module (8) when the laboratory device (1.6) is operated.
