Abstract (en)
[origin: CN104340453A] A container for dispensing a flowable substance, in particular glue, such as instant glue, includes a receiving body which has a circumferential wall and a main axis extending in the longitudinal direction of the receiving body. The bottom of the receiving body is formed either by a plug inserted into an open end of the receiving body or by an end wall formed integrally on the circumferential wall. A nozzle or dispensing tip for discharging the flowable substance is arranged at an end side of the receiving body facing away from the receiving body bottom. The nozzle or dispensing tip has an outlet opening. A lever is arranged on the circumferential wall and extends along the main axis forming an acute angle with the circumferential wall so that a slit-like intermediate space is formed.
