Abstract (en)

A hydrogen generator (1) comprises a reformer (7), a combustor (15), a first temperature detector (10), a raw material supply unit (11), a raw material flow measuring unit (12), a water supply unit (13), a combustion air supply unit (16), and a control unit (18). The control unit is configured to control an amount of the raw material gas supplied from the raw material supply unit such that a first detection temperature detected by the first temperature detector reaches a predetermined temperature, and to control at least one of an amount of the water supplied from the water supply unit and an amount of the air supplied from the combustion air supply unit, based on the flow of the raw material gas which is measured by the raw material flow measuring unit.
