Abstract (en)

[origin: EP2650205A1] The module (1) has a floatation tank (2) that is made of two floatation half-tanks (2a, 2b) of a hinge (3) about a hinge line (A). The half-tanks are moved between an open position in which the half-tanks are aligned and form a floatation tank, and a closed position in which the half-tanks are folded back as a lid to form a container box. A set of elements (10a, 10b) of beams and joists is movable between an arrangement position and a deployed position in which the joists are directed according to a transverse direction with the half-tanks near a center line of the tank.
