Abstract (en)  
[origin: WO2013153018A1] The invention relates to a device for producing synthetic fibres, comprising a spinning apparatus, a galette apparatus and a winding apparatus, wherein the apparatuses have a plurality of drives and control units that are cooled during operation. To be able to carry out energy-efficient cooling of the drives and control units independently of the air conditioning apparatus, a central water-cooling apparatus is provided according to the invention.
