Abstract (en)

[origin: WO2013152777A1] The invention relates to a suitcase for transport of tool assortment comprising a bottom, a corresponding lid, a pivotable handle and a lock. The lid and the bottom are connected to each other by hinges. A first surface of the lock interacts with a protruding part of the handle. The protruding part is moveable between a first position where the lock is locking the lid to the bottom and a second position where the lock is adapted to be released. The lock comprises a protruding engagement means being turnably mounted on a first axle placed on the lid. The protruding engagement means is adapted to engage with a locking key being a part of the bottom; said engagement takes place when the protruding part is in its first position.
