Abstract (en)
[origin: WO2013153200A2] A kit for a device which is intended for retaining obliquely positioned solar elements (3) and can be set up on a substantially horizontal surface, having at least two supporting elements (2) which, in the functional position, form a bearing means for the solar elements (3), are spaced apart from one another, and connected to one another, and each have a triangular frame (5) consisting of frame parts, wherein the frame parts are in the form of at least one bearing rail (4), of at least one bearing limb (6, 6') and/or of a supporting limb (7) made of sheet-metal mouldings, is designed such that each bearing limb (6, 6') has angled fastening lugs (12) which engage behind the underside of a frame (23) of the solar element (3) located above.
