Abstract (en)

[origin: WO2013152856A1] The aim of the invention is to allow a simple ground contacting of a shielding (7) of a coaxial line (4), in particular a parallel ground contacting, in a simple manner. This is achieved in that the connection holder has a housing (2) for receiving preferably multiple coaxial lines (4) which are fed through the housing (2) in a parallel manner. A ground contacting strip (10) lies in the housing (2), and the shieldings of the coaxial lines (4), which are stripped in a contact region (6), are placed against the ground contacting strip in a clamped manner.
