Abstract (en)

[origin: EP2455268A1] The system has conveyor ropes (21, 22) driven independent of each other. Vehicles (3) are coupled to the conveyor ropes by a clamping device. End regions overlap with each other at the conveyor ropes. The vehicles are shifted from one of the conveyor ropes to the other conveyor rope. The latter conveyor rope is connected to the former conveyor rope in areas. Actuating devices (4, 5) are provided for actuating a rope shaft (22a) of the conveyor ropes to which the vehicles are coupled, where the clamping device of the vehicles is moved in an open position.
