Abstract (en)
The system for transferring particulate material to a filter making apparatus comprises a main loading unit, a supply container and a filter making apparatus. The main loading unit comprises an inlet port connectable to an external reservoir of particulate material for the transfer of particulate material from the external reservoir of particulate material into the main loading unit. The main loading unit further comprises a closable outlet port. The supply container comprises a closable supply inlet connectable to the closable outlet port of the main loading unit for receiving particulate material from the main loading unit. The supply container further comprises a closable supply outlet, which is connectable to the filter making apparatus for transferring particulate material from the supply container to the filter making apparatus.
