Abstract (en)

[origin: US2015033887A1] A shifting arrangement for a transmission includes a shifting sleeve, a friction clutch and an actuating element. The shifting sleeve is rotatable between a first position, wherein a first free gear is rotatable relative to a shaft, and a second position, wherein the first free gear is rotatably fixed to the shaft. The friction clutch assembly is movable between a first position, wherein two parts are rotatable relative to one another, and a second position, wherein the two parts are frictionally coupled. The actuating element is movable between a neutral, intermediate and positions. In the neutral position, the shifting sleeve and the friction clutch assembly are in their first positions. In the intermediate position, the shifting sleeve is in its second position and the friction clutch assembly in its first position. In the shifting position, the shifting sleeve and the friction clutch assembly are in their second positions.
