Abstract (en)

[origin: WO2013156196A1] The invention relates to a method for producing a structured, at least partly optically transparent, varnish surface on the surface of a substrate board (1) that has a decoration, preferably a wood material board, in which transparent or at least partly transparent varnish for producing the structured varnish surface is applied to an applicator roll (6.2) and, by means of the applicator roll (6.2), is transferred to the surface of the substrate board (1) having a decoration, and in which the varnish is applied by means of a plurality of digitally controlled nozzles (6.1, 6.1') to the applicator roll (6.2) in a distribution defining a structure and/or is transformed on the applicator roll (6.2) into a distribution defining a structure. Furthermore, an apparatus for carrying out the method is described.
