Abstract (en)

[origin: WO2013156181A1] The invention relates to a filling plant (1) for containers (2, 3) and a method for operating the filling plant, wherein at least two separately controllable transport paths (7, 8) for pressureless container transport are provided in each case with at least one single-track container buffer (9, 10) downstream of a filling machine (5). The transport paths can be flexibly supplied as required with containers having a round or non-round cross-section and in the event of a production failure in one of the transport paths at least the other transport path can continue to be used for production.
