Abstract (en)

[origin: WO2013156360A1] The invention describes the use of a combination of at least one stable nitroxyl radical and at least one quinone methide as a stabiliser for resin mixtures and reaction resin mortars based on radically curable compounds. Resin mixtures and particularly reaction resin mortars can be made storage-stable very effectively with a combination of at least one stable nitroxyl radical and at least one quinone methide.
