Abstract (en)
[origin: WO2013156126A1] The invention relates to a drive point (1) for a substantially tubular, in particular hollow cylindrical, driven pile (2) having a pile core (3) through which concrete can be introduced into the driven pile (2), wherein the drive point (1) can be fitted onto one end (4) of the driven pile (2), wherein at least one first supporting web (6) with a first contact surface (7) for an end face (8) of the pile end (4) is arranged on an inner wall (5) of the drive point (1), wherein starting from the plane of the first bearing surface (7) the drive point (1) has a cavity (9) which extends at least partially in the driving direction (E) and into which concrete can be introduced through the pile core (3) when the driven pile is fitted, wherein at least one concrete outlet channel (10) is provided which connects the cavity (9) to an upper edge (11) of the drive point (1).
