Abstract (en)

[origin: WO2013158055A1] The present invention relates to prevent the drive belt (10) used to convey the movement from the drive to the carrier wheel (13) enabling the awning fabric to move when the awning is opening and closing, to be released out of the belt movement canal (11.1) and the carrier wheel inside the profile, as a result of the physical reaction of the drive belt (10) due to the oval structure of the profile in particularly oval shaped awnings used in various locations.
