Abstract (en)

[origin: WO2013158016A2] The present invention relates to a network node and a method for managing transaction information related to an electronic transaction in an electronic payment solution. The network node comprises a receiver configured to receive transaction information related to an electronic transaction, wherein the transaction information comprises a unique identifier associated with the electronic transaction. The receiver is further configured to receive a request for transaction information including the unique identifier. The network node further comprises processing means configured to find the transaction information by using the unique identifiers, and a transmitter configured to send the transaction information and the unique identifier.
