Abstract (en)  
[origin: US2013274936A1] A decision support system for energy use demand management manages energy consumption and costs. A one way broadcast communications capability transmits energy management data to a population of energy consumers. A receiver-controller changes the energy consumption of an apparatus in response to receiving the energy management data. An energy consumption monitor determines energy consumption information related, at least in part, to the energy consumption of the apparatus, and provides energy consumption information through a feedback path that can be correlated with the energy management data. The receiver-controller changes the energy consumption of the apparatus in response to an analysis of the energy consumption information.
