Abstract (en)

Support device for manual hair dryers in suspended position, based on a "balance" mounted up high, equipped with a thread-like element, from which the dryer is hung, in order to be able to place it at the desired height, the joining device used to join the dryer (1) to the thread-like element (3) of the balance (2) being formed by a first ring-shaped body (4) attached to the dryer (1) body; a second ring-shaped body (5) with a pair of divergent axial arms (6) and; a handle (7), which is joined to the ends of the pair of divergent axial arms (6) of the second ring-shaped body (5), hung on the thread-like element (3) of the balance (2), the first ring-shaped body (4), attached to the dryer body (1), being guided rotationally by the second ring-shaped body (5) which clasps it, the manual hair dryer thus being suspended, thereby facilitating the use thereof, given that the user only needs to manually move or direct the dryer, without having to support it "freehand", thus obtaining better working conditions.
