Abstract (en)

[origin: WO2015024899A1] The invention relates to a system comprising a supporting guideway tube (1) and a movable supporting device (16), said device (16) being arranged to move along a longitudinal axis of the supporting guideway tube (1). The supporting device has a suspension device (22) which is designed to carry a suspended load. The suspension device (22) co-operates with a braking device (23) of the supporting device (16) in such a way that a braking action is exerted on the supporting device (16) according to the load, with respect to the motion of the supporting device (16) along the supporting guideway tube (1).
