Abstract (en)  
The invention relates to a common carrier munition ammunition device, more particularly to common carrier payload delivery shell with a frangible ogive element. There is provided a common carrier munition comprising a tail unit, a main body (5) which comprises a payload cavity (15) for receiving a payload (22), a fuze, and located between said main body and the fuze an frangible ogive element (7), wherein the tail unit and main body comprise cooperatively engaging male and female threaded portions, wherein at least one of the threads is a shearable thread.
