Abstract (en)
[origin: WO2013160377A1] The invention relates to a hallux valgus sandal (1), comprising a sole element (10) having an outsole (12) and a footbed (14). The hallux valgus sandal (1) also comprises a big-toe support (40) for laterally supporting the big toe and a metatarsal belt (20), which circularly surrounds the metatarsal bones in interaction with the sole element (10) when the sandal (1) is worn and the length of which can be changed. A pressure cushion (30) is arranged on the inside of the sandal (1) in the area of the metatarsus in such a way that a laterally directed force can be applied to the inner metatarsal bone by applying the metatarsal belt (20) over the pressure cushion (30).
