Abstract (en)
[origin: WO2013160607A1] The invention relates to an attachment system (1) including: an insert (5) comprising an opening (7); a holder (20); and an attachment rod (25) extending between first (25) and second (25b) ends, wherein the second end (25b) of the attachment rod (25) and the opening (7) of the insert (5) are shaped so as to enable the second end (25b) to pass through the opening (7) in a first angular position, and to prevent the second end (25b) from passing through the opening (7) in a second angular position, the attachment rod (25) and the insert (5) being configured such that the second end (25b) engages with a rear surface (5b) of the insert (5) when the holder (20) is attached to the front surface (5a) via the attachment rod (25) in the second angular position.
