Abstract (en)
[origin: WO2013160191A1] A tool cylinder which can be used, in particular, as a working cylinder of an embossing machine or printing press (100), which working cylinder interacts with a back-pressure element (300), has a sleeve carrier (210) and an exchangeable tool sleeve (250) which can be fastened releasably to the sleeve carrier. The sleeve carrier (210) has a carrier element (220) which carries a first end piece (230) on a first axial end section (212) and a second end piece (240) on a second axial end section. In the mounted state of the tool cylinder, the tool sleeve is clamped between the end pieces (230, 240), and a radial spacing exists between the carrier element and the tool sleeve in a region between the end pieces.
