Abstract (en)
[origin: WO2013160391A1] The invention relates to a woven-fabric band, in particular a forming fabric, for a machine for producing and/or processing a fibrous web, comprising a first woven-fabric layer having first longitudinal threads and first transverse threads woven with the first longitudinal threads and a second woven-fabric layer having second longitudinal threads and second transverse threads woven with the second longitudinal threads, wherein the two woven-fabric layers are arranged one over the other and the weaving pattern of the woven-fabric band is repeated in pattern repeats, wherein the first longitudinal threads and the second longitudinal threads are arranged in a plurality of groups in each pattern repeat, with a first group and a second group and at least one further of the first and/or second group, wherein each first group is formed from a first longitudinal thread and a second longitudinal thread arranged below said first longitudinal thread and wherein the first and second longitudinal threads in each group are arranged at no offset or only a slight offset from each other as viewed in a perpendicular projection onto the woven-fabric layers, such that a clearance of a half diameter of a first longitudinal thread is formed therebetween at a maximum.
