Abstract (en)
[origin: WO2013159994A1] The invention relates to a multi-stage planetary power-shift transmission between a drive shaft (AN) and an output shaft (AB), in particular an automatic transmission for a vehicle, characterized in that the multi-stage transmission comprises two parallel shaft sections (WS1, WS2), six shifting elements (K1, K2, K3, K4, B1, B2), at least two spur gear stages (STS1, STS2) and three planetary gear sets (PS1, PS2, PS3) with respectively one sun gear (SO1, SO2, SO3), a ring gear (HO1, HO2, HO3) and a planetary carrier having several planetary gears. Said planetary carrier is united in a planet carrier (ST1, ST2, ST3) and both of the shaft sections (WS1, WS2) can be interconnected by means of at least two spur gear stages (STS1, STS2). The six shifting elements (K1, K2, K3, K4, B1, B2) engage selectively so that various transmission ratios between the drive shaft (AN) and the output shaft (AB) can be produced, such that a plurality of forward gears, in particular nine forward gears, and at least one reverse gear can be shifted.
