Abstract (en)

[origin: CA2871217A1] The invention relates to a fastening device (1) for fastening an apparatus (5) or a body to a top-hat rail (40) by means of the rear wall (7) of the apparatus or body, comprising a first upper (10) and a first lower (20) retaining device, wherein the first upper retaining device (10) encompasses an upper edge of the top-hat rail (40) in the fastened state and the first lower retaining device (20) encompasses a lower edge of the top-hat rail (40) in the fastened state, wherein the first upper retaining device (10) is designed to be resilient in such a way that the apparatus (5) or the body can be inserted into the top-hat rail (40) by tipping the apparatus or the body in an insertion tipping direction (k) about a tipping axis (Z) extending parallel to the top-hat rail longitudinal direction.
