Abstract (en)

An automated centrifuge apparatus (300) for conducting a cell preparation procedure is provided. A rotor assembly (304) supports centrifuge tubes (310), which are installable at respective tube positions (P 1 -P 4). The tube positions are indexable to an index location (336). A sensing module (324) monitors the index location during a set of status checks, which relate to the centrifuge tubes (310). Logic signals generated by the sensing module (324) are used to automatically determine whether the status checks are satisfied.
