Abstract (en)

[origin: EP2842700A1] A connection device 1 according to the invention includes a conducting part 39 which comes into contact with a terminal Eb projecting from an outer surface of an electrical apparatus E to establish an electrical connection for charging or communication, and a housing H. The housing H includes a wall part F. A hole 601 which exposes the conducting part 39 is formed in the wall part F of the housing H. An outer surface 3901 of the conducting part 39 is located closer to an inside of the housing H than an outer surface F1 of the wall part F, or at the same surface level as the outer surface F1 of the wall part F.
