Abstract (en)
[origin: EP2843111A1] A laundry machine (100) adapted to dry laundry by means of a flow of drying air, comprising: a machine cabinet (110) for accommodating components necessary for the operation of the laundry machine (100); inside the cabinet, a laundry treatment chamber (105) adapted to contain the laundry to be dried; a cabinet top element (125) incorporating at least part of a drying air circuit in fluid communication with the laundry treating chamber through a drying air inlet opening (210) and through a drying air outlet opening (215) formed in the cabinet top element, the cabinet top element comprising a bottom base element (205) and a top cover (240) and, defined in an interspace between the base element and the top cover, a drying air path for the flow of drying air between said drying air inlet opening (210) and said drying air outlet opening (215), said drying air path including a moisture condensing arrangement (225,230). The drying air inlet opening (210) is formed in a wall (217a) extending within the interspace between the base element (205) of the top element (125) and the top cover (240) thereof.
