Abstract (en)
[origin: EP2843148A1] A system for window installation in the roof is characterised in that when the window is closed, the glazing unit (11) of the window is immersed in the roof structure, so as to at least a half of thickness (G) of the glazing unit (11) is situated in the roof structure deeper than the surface (PP) called "sub-cover surface" of structural elements of the roof, the surface having roofing mounted, for instance surface of battens (41), on which roofing tiles (42) are mounted. In the pivoting hinges (3), connecting the window sash (1) with the window frame (2), centres of mass of the elements (31) of these hinges, which are connected with the sash, are situated above the external surface of the glazing unit (11), when the window is closed.
