Abstract (en)

[origin: WO2013164179A1] The invention relates to a holding device for a support element of a cabinet, wherein the cabinet has a seating surface (1) for seating the support element (2) or at least one holder (3) connected to the support element (2) and a bridge (5) arranged with a spatial distance to a wall (4) of the cabinet and each holder (3) on the support element (2) has at least one elastically deformable limb (6) that at least partially encloses the bridge (5) in a barbed manner when the support element (2) is inserted.
