Abstract (en)  
[origin: WO2013164543A1] The invention relates to a method for forming packs of flat bags (1) and a machine for carrying out said method, in which: a continuous line of bags (1) moving in an oriented direction of advance (F3) is received, the bags (1) are moved onto a receiving table (4) on which the bags (1) are stacked while being stopped from moving in the oriented direction of advance (F3) by an abutment (5). The continuous line of bags is converted (1) into a line of overlapped bags before stacking the latter, and the bags (1) are separated on the receiving table (4) by a separating means (8) comprising a separating device (80). During this operation, the separating device (80) is inserted, by means of a movement in a separating direction (F4) perpendicular to the plane of the bags (1), between a preceding bag (1c) and a following bag (1d) in the overlapped line such that, when the following bag (1d) is stopped against the abutment (5), the following bag is at least partially retained by the separating means (8).
